## Gossip of Market and Mines by Minnear & Co.

THE METAL-

Statement was much better than expected.

enter the metal market for their quarterly requirements, The last buying which resulted in the advance in copper GREENE CANANEAfrom 14% to 15% started with inquiries around the middle of December. According to London cables, copper is being sold there under 14% cents, and during the past week stock. The cutput was only 2,282,000 pounds as compared fature warrants have been slightly lower,

The Producers' Statement showed a production of 122, \$1,997 pounds, which is at the rate of 4,341,460 pounds per day for the short month. This is 99,000 pounds greater v reflects the improved conditions in the Lake dutriet.

The demestic demand for copper continues far from satofactory, although about the same amount of copper went into consumption in the twenty-eight days of February as was used in the previous month of thirty-one days. Exports continue to be the backbone of the metal market, and total deliveries for export in February were \$3,899,183 cands, according to the Producers' report. These Febunty export figures are the highest for any like month for he past six years.

But few realize to what extent this Lake Superior strike assisted in maintaining the strong position of the metal. While all the figures are not obtainable, it is conservatively estimated that the Lake district lacks 50,000,000 pounds and even now there are only a few of the producing comsenies that are getting out the same amount of copper a they were outputting the early part of last year,

#### CLIFF MINING-

The annual statement of this company has been issueand shows a balance of assets on December 31st of \$46,317, ill of which is in cash and accounts receivable. The comsany disbursed for development work during the past year

President Agassiz states that shaft developments in the orizon of the Kearsarge lode were far from satisfactory. and this work was stopped early in June. During the last part of the year, three diamond drill holes were driven to complete the data for the cross-section. This cross-secion covers the territory of the old Colony-Mayflower lodes. So far the disclosures have been unsatisfactory,

The Ashbed lode which is showing up so favorably of the Phoenix tract of the Keweenaw will be diamond-drilled numediately upon completion of the work now under way

The annual report of this company has been issued, and bile it is had enough, the market would imbeate that if s no worse than stockholders expected.

The earnings for the first six months of 1912 were \$419. oe, while at the end of the year the company had only ing a cash loss in the last six months of \$37,033. During the last six months of 1913, this company produced 2, 295,670 pounds of refined copper, which cost well in excess of 17 cents per pound; this brought the average cost for the year up to 12,30, for the 9,029,340 pounds produced during the first six menths were made at a cost of 10.79, the ost of construction, selling the copper, and Eastern office expense being included in all cases.

There were paid in dividends \$229,000 in excess of earnngs, but even after paying out more than the company sirned, Osceola has a balance of assets in excess of habinties of \$1,549,300, or which nearly \$1,000,000 is in cash and quick assets.

Stockladders will undoubtedly scan the report closely in on endeavor to ascertain the cost to the company in combating the strike. What the real financial loss was is hard to determine, for even now the company is under extraordinary experse owing to the recent labor difficulties. In addition to the cash loss of \$27,000 as shown in the statement, the company has depleted its main asset, which i

the capper in the ground to the extent of 2,295,670 pounds. These costs in the past six months again demonstrate he advisability of operating a property to its maximum squarity in order to get the most efficient results as the everhead expense per pound is very high when only about % of a normal product is being made, as was the case in the last six months of 1913.

The South Kearsarge and Osceola branches resumed hoisting on September 12th after a lapse of idleness of fifty days. Hoisting at the North Kearsarge branch was not started until December 15th, or three months later than the other branches. The South Kearsarge branch, which produced a major portion of the output, made very creditable showing in holding down costs for the cear to 5.11 cents per pound, which compare with the North Kealsarge branch costs of 1546 cents and 20.79 per round for the Old Osceola. One reason for the excessive est at the Osceola branch is the lower yield of copper per ten of rock, it being only 10.97 during the year 1913 while 128 was secured in 1912.

Osceola Consolidated had 1,143 men employed last July, nd at the time of compiling the annual report, or Februry 21st, it was officially stated the company had 1,117 men in its employ. Notwithstanding this fact, shipments are not yet up to normal as it takes a little time to get the organization back to its former efficiency. While no official statement has been made, it is hardly likely the company any more than broke even from its operations for he menths of January and February.

While no vicience has been committed for the past few

There has been considerable strength displayed in this lesse, and if it were not for the fear of a heavy assessment, it would probably have recorded a good advance the

The nanual report will be out the latter part of the coming week, and will show liabilities in excess of assets of \$129.000. The report is now in the hands of the printer with undigested food, which sours and clean, Stormen sweet, Head clear, and and should be distributed to stockholders in the next ten WOLVERINE-

President Edwards advised us that there is a possibility of financing the needs of the company without calling on out calling an assessment. Just what these plans are Mr pany. Elwards could not state,

The company has 23,333 shares of treasury stock, and it As yet no noticeable demand has appeared for copper, this stock were sold at the present market price for the ad some of the selling agencies have made further reduc- shares, it would give the company in excess of \$200,000. tions in their asking price notwithstanding the Producers' This sum would liquidate its present indebtedness, and give the company a working capital sufficient to thorough-The time is close at hand when manufacturers should is develop the Allouez Conglomerate lode on the lower

The output of this company for February was certainly a disappointment and has been reflected in the price of the with 3,460,600 in January. Stockholders also show a disposition to be a little nervous over the Mexican situation. which probably accounts for some of the selling. It seems likely that a \$1 dividend will be again declared the coming Gaily than the dark production in January, and undoubted- quarter, although we question whether or not it will be earned.

#### TUOLUMNE-

At the annual meeting of this company, President Hickey and associates were re-elected, they controlling 500,000 shares where the opposition could only muster 100,000

It has been announced this company made an output of 1.880,514 jounds of copper during the year 1913, and the average copper contents of the ore shipped were 2.8%, Tuolamne also produced 77,571 ounces of silver and 140 annees of gold in 1913.

It has been stated that during the month of December, the company broke even and during January and February the treasury was increased to the extent of \$10,500 from the company's mining operations.

This company has \$22,000 cash on hand and no indebtediess. The ere body being developed on the 2,400 level is improving in value with no evidence of faulting.

This stock quickly recovered from its low point madthe latter part of last week, when it sold at 42 cents. UNITED STATES STEEL-

The report of the United States Steel untilled tonnage an of March 1st showed an increase of 417,000 tons, Reports, however, for the first ten days of March are not very ontimistic, and it is stated that the independents did not share as well as the big company in booking new bustmers. "Scrap iron and steel are a drug on the market," say dealers in second hand, and prices are lower than for sometime past

i'nless the railroads which are the mainstays of the Steel Corporation are granted the increase in freight rates asked very soon, it will seriously affect the earnings of this big corporation, for unless the specifications for new construction are in before the first of June, it rarely happened that any new work is gotton out in that year. Then again, the inability of the railroads to get their financial requirements is preventing them from placing some orders for

Our attention has been called to the possibilities of a cur in the dividend on Steel Common to 4% unless there is some radical change in conditions, and very soon, which will allow the company an increased profit on its business. BUTTE AND LONDON -

There was a great deal of activity in this low priced issue this week, and the stock rallied to 57 cents. It certainly has great possibilities for Eutte & London through its contract with the Rainbow will have its property thoroughly explored.

The reason for the strength in Butte & London was the report that the portion of the machinery that has delayed the unwatering of the shaft has been shipped, and that active work at the property will be started furing the com-

The report of the Rainbow Company stated that \$16,722 ad been spent so far on the Batte & London contract, so it can be seen that all the preliminary work should have been accomplished with this expenditure.

### SOUTH LAKE-

The unwatering of the South Lake shaft was completed Wednesday of the past week and sinking resumed. At the time of coosing operations at this property last July, the shaft was down to a depth of 537 feet, and the present plans are to smk this shaft an additional 86 feet before commencing any lateral work. At the time of closing down this property on account of the strike, a crossous was being driven northwest to intersect the amygadloid lodes designated as Nos. 1, 2 and 3 on the 300 foot level, which lodes were encountered in shaft sinking between 110 and 210 feet and which showed good values. Before work was stopped, this crosscut was advanced 40 feet in No. 3 lode, which was the first one encountered, and the copper values disclosed were good.

This lateral work, however, interferes with shaft sinks ing, and it is the present plans of the management to center all efforts in getting the shaft down to the 600 level, so that when lateral work is again resumed crosscutting can be carried on from several different points. One of the most important crosscuts will be the one to be driven southeast from the 600 level to develop those lodes disclosed in diamond drill heles No. 3 to No. 8, and which it is estimated will require 1,005 feet of crosscutting to reach. Just as seen as the shaft has been completed to the 601 level and a station cut, work will be resumed on the 200 level enescut to the northwest, and also a crosscut on the con in this direction, both to explore the lodes cut in the

1 5/4/ CIELEM A rock crosher plant has been installed at the property, so that all the velo matter coming from development work can be crushed and a thorough mill test made as the work

According to President Edwards, the consolidation of menths, the company still maintains a force of deputies to the directors meetings, neither has the matter been taken up with him in an official way.

Considering the low capitalization, only 67,919 shares being issued, South Lake offers great speculative possibilities. The company had cash on hand of \$39,000 at the close of the fiscal year as well as 32,081 shares of unissued stock in the treasury. While it will require from six weeks to two months before crosscutting to the reveral lodes is well underway, we would not be at all surprised to see this stock strengthen considerably in that time.

Directors of this company have advised stockholders that owing to operations still being handicapped at the the stockholders for an assessment at this time. While it advisable to defer action on the semi-annual dividend. mine on account of the labor troubles, they have deemed he stated that there is nothing positive about the negotiations along these lines being successful, stockholders and it is rather disappointing as a great many stockholdshould be pleased that the directors are endeavoring to ers had hoped that a small disbursement could be made without impairing the strong financial position of the com-

Continued on 3rd Page, Cols. 1, 2, 3.
